

# STAGE 250 EW™

## For Disease Free Crops

## Triple Action

Prevent, Cure & Eradicate Disease

AVAILABLE IN:  
50ml, 100ml, 500ml, 1lt

### Stage 250EW

Active Ingredient: Tebuconazole 250 gr/ltr

WHO Classification: III (Slightly hazardous – Blue colour band).

Stage is a broad-spectrum, systemic fungicide with curative action for the effective control of Rust, Powdery Mildew, Leaf spot and Anthracnose on a wide range of crops.

### Properties & Advantages

- DOES NOT EFFECT non-target species like plants and animals! Safe for environment.
- Active at very low doses against a wide range of fungal pathogens.
- Preventative, curative and eradicated action against various diseases.
- Does not wash off easily in rainy conditions.
- Cost effective
- Advanced EW formulation which offers the following benefits:
  - Less harmful to the environment
  - Easier to handle
  - Lower phyto-toxicity.

### Application

Crop	Diseases	Rate	Rate/Knapsack
French Beans	Rust, Anthracnose	500-750 ml/ha	10-20 ml/15lt water
Wheat, Barley	Rust, Powdery mildew, Glume blotch, Leaf spot	500-600 ml/ha	10-20 ml/15lt water
Tomatoes	Powdery mildew, Alternaria, Olpidium, Fusarium wilt	500-750 ml/ha	10-20 ml/15lt water
Onions	Stemphyllium, Powdery mildew, Purple blotch	500-750 ml/ha	10-20 ml/15lt water
Coffee	Coffee Coffee berry spot, coffee leaf rust, Coffee berry disease, Stem canker, Fusarium root Disease, Bark disease	500-600 ml/ha	15-22.5 ml/15lt water for mature plantations 10-15 ml/20lt water for nursery

### Wheat Stem Rust:

Best applied between flag leaf and ear emergence. Preventative application gets better results. During rains and high temperature, apply second spray after 3-4 weeks.

RE-ENTRY PERIOD: 12Hrs or upon drying.

PHI: French Beans/Tomatoes/Onions - 14 days, Wheat - 30 Days
