BETTER COWS > BETTER LIFE

CRV, leading in health and efficiency

Jersey Facts

- Jersey are a very sustainable breed:
  - ✓ They use 11% less land
  - ✓ 32% less water and
  - ✓ Their carbon footprint is 20% less than other breeds.

- Jerseys are unique:
  - ✓ The calves have a small birth weight, on average about 27kgs.
  - ✓ Have easy births, the difficult birth rate is less than 1%.
  - ✓ Reach sexual maturity earlier in life.

Jersey is the breed for **efficiency and high bottom-line profitability**

SIREMATCH

THE PERFECT MATCH FOR A PERFECT HERD

SireMatch is a breeding management program that helps you to get maximum progress in your herd with minimum effort. SireMatch offers you a choice of breeding goals that you can adapt and customise to suit your own wishes.

Based on your breeding goal and the pedigrees, breeding values and performance of your cattle, the mating program generates the best mating propositions. This approach excludes the risk of inbreeding. SireMatch puts together all the pieces for you in the breeding puzzle giving you the guarantee of maximum genetic progress and improvement in your herd with a minimum of effort.

The unique benefits of SireMatch:

Unbiased mating advice

SireMatch offers you objective and unbiased mating advice. The most suitable bulls are selected based on your own breeding goal and the program can include bulls from other genetics suppliers. The advanced program calculates the best possible mating match for every animal.

No more worries

SireMatch relieves you of all the worries about breeding. The program prevents inbreeding and matings that involve a higher risk of genetic defects.

Customisable

SireMatch can be completely customised to suit your own requirements and wishes, including defining a breeding goal. You can set lower limits for certain traits, weight the importance of other traits that need extra attention in your herd and indicate the maximum acceptable level of inbreeding. You can also choose different breeding strategies for multiple groups of animals.

Web-based

SireMatch is completely web-based. This means the program is regularly updated so that you always work with the very latest animal data.

For all breeds

SireMatch supports all breeds and the program can also be used by farmers who cross-breed between breeds.

Includes selection

SireMatch can make an objective selection of animals for you that make the best match with your own breeding strategy. You can decide to apply a targeted strategy and mate the best animals using SiryX sexed semen, and maybe exclude lower ranked animals from the breeding program by inseminating them with semen from a beef bull.

"With SireMatch a good cow from head to toe"

Based on all the available data

SireMatch uses all the data available on your herd – known breeding values, classification and milk recording. Farms with only low levels of official herd data can also use SireMatch. In that case, the program uses known pedigree data. If available, SireMatch will use the genomic breeding values – from the bulls and from your own cows and heifers.

Practical reports

SireMatch users will receive practical, clear reports. As well as mating advice per animal and an overview of the recommended bulls, the report also predicts the expected genetic progress and improvement. The selected program settings are also clearly presented.

SireMatch advisor

SireMatch is more than a mating program. Your personal SireMatch advisor answers all your questions about breeding.

CRV, leading
in health and efficiency

CRV Health

More return, less work

With the best bulls for CRV Health, you will breed cows that get pregnant easily, have healthy hooves and suffer less from mastitis. Your cows will calve more easily and will be less susceptible to ketosis.

HOOF HEALTH

Hoof health 104

- ↓ 3% less claw problems
- ↓ 500 euro less costs

FERTILITY

Fertility 104

- ↑ 3% higher percentage non return
- ↓ 750 euro less costs

UDDER HEALTH

Udder health 104

- ↓ 2% less clinical mastitis
- ↓ 600 euro less costs

CRV, leading
in health and efficiency

CRV Efficiency

More milk with the same amount of feed

With the best bulls for CRV Health, you will breed a herd that is more productive, has a higher longevity and a higher feed efficiency. The result is a higher efficiency, but you also contribute to lower methane emissions.

PRODUCTION

Production (Inet) 130

- ↑ Higher content levels and/or more kg fat & protein
- ↑ 6500 euro higher net profit

LONGEVITY

Longevity 270

- ↑ 135 days higher longevity
- ↓ 3700 euro savings in replacement costs

FEED EF ICIENCY

Feed efficiency 104

- ↑ 2% higher feed efficiency
- ↑ 6000 euro more profit

Savings/returns are per 100 dairy cows per year

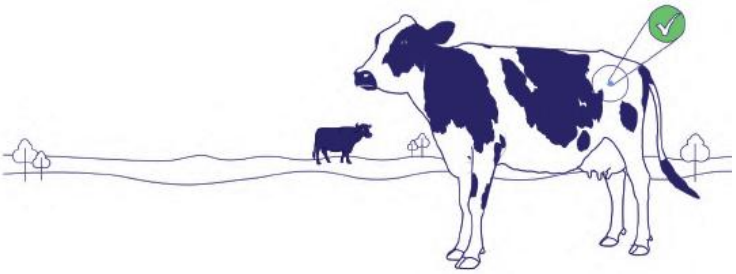
Why prompt® BOVEASY?

bovine pregnancy rapid test kit



Detect pregnancy in just 28 days after AI

Non-invasive test method makes it safe for embryos and imported semen

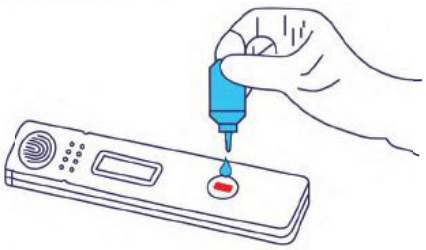
98% accuracy rate as it detects pregnancy-associated glycoprotein

3 simple

01 Sample Collection
Collect 2-3 ml of blood from the tail/ jugular/ ear vein of the bovine or after the 28th day of artificial insemination.

02 Sample Preparation
Add 2-3 drops of blood into the sample well of the test strip.

03 Adding Diluent
Add 2 drops of diluent in the sample well.
Get results in just 20 minutes.
For accurate interpretation, read the results within 10 minutes.



Get results in 10 minutes

The test kit has three lines, C is the control line, B is the base line and T is the test line. If the test line T appears darker red/pink than the intermediate baseline, it proves that the animal is pregnant.
